# Tor browser for windows 8. 1

Hi, the last laptop died, and I was forced to upgrade. The new laptop windows 8.1 64 bit. Will the browser package work with 8.1? Also, because Windows 8 sucks, I have classic shell installed. Would that be a problem? Thanks. PROTECT YOURSELF Download Tor Browser in your language Stay up to date with the latest software releases, news, software discounts, offers and more. Download the Tor desktop app to experience real private browsing without tracking, monitoring, or censorship. It also allows software developers to create new communication tools with built-in privacy features. Tor Browser for PC is the basis for many applications that allow organizations and individuals to share information over public networks without compromising data protection. Features and HighlightsBLOCK TRACKERSTor Browser isolates all websites you visit, so third-party trackers and ads can't track you. Cookies are automatically deleted when you're done browsing. So is your browsing history. PROTECT AGAINST MONITORINGThe app prevents someone from monitoring your connection so you know what websites you're visiting. Everyone who watches the habits to see that you're usingTor.RESIST fingerprintA browser designed to make all users look the same, making it difficult for you to fingerprint based on your browser and device information. MULTILAYER ENCRYPTION Traffic is transmitted and encrypted three times as it passes through the Tor network. The network consists of thousands of volunteer servers run by the name tor relays. Browse freelyWith Tor Browser, you can freely access sites on your home network may be blocked. Also available: Download Tor Browser for Mac Stay up to date with the latest software releases, news, software discounts, offers and more. Subscribe Tor is a network of virtual tunnels that allows people and groups to improve their privacy and security online. It also allows software developers to create new devices with built-in privacy features. Tor provides the basis for many applications that allow organizations and individuals to share information over public networks without compromising their privacy. Note: You can also download the latest beta version, Tor Browser 10 Alpha 7 here. Individuals use Tor to prevent websites from tracking them and their family members, or from connecting to news sites, instant messaging services, or the like if blocked by local INTERNET service providers. Tor's hidden features allow users to post websites and other services without having to reveal the location of the site. Individuals also use Tor for socially sensitive communication: chat rooms and internet forums for rape and abuse survivors, or people with diseases. Journalists use Tor to communicate more securely with whistleblowers and dissidents. NgOs use Tor to allow their employees to connect to their home site in a foreign country without notifying everyone nearby that they are working with that organization. Groups like Indymedia recommend Tor to protect their members' online privacy. Activist groups like the Electronic Frontier Foundation (EFF) recommend Tor as a mechanism for maintaining civil liberties online. Companies use Tor as a safe way to conduct competitive analysis and protect sensitive procurement patterns from eavesdropping. It is also used to replace traditional VPNs that reveal the exact amount and timing of communications. Where do employees work for a long time? Where are there employees looking for job-seeking websites? Which research departments communicate with the company's patent attorneys? A branch of the U.S. Navy uses Tor for open source intelligence, and one of its teams used Tor while stationed in the Middle East recently. Law enforcement uses Tor to visit or monitor websites without leaving government IP addresses in their blogs and security during surveillance operations. Welcome Screen The old screen had too much information for users, which many people spend a great deal of time confused about what to do. Some users of the paper experiment spent up to 40 min confused about what to do here. Besides simplifying the screen and message to make it easier for the user to know if they need to set anything or not, we also had a brand update bringing the logo to the launcher. Censorship bypass configuration This is one of the most important steps for a user who is trying to connect to Tor while the network is censored by Tor. Very we also worked to make ui text easier for the user to understand what a bridge is for and how to configure it. Another update was a small tip that I added to the drop-down menu (as shown below), which bridge used in countries that have very sophisticated censorship methods. Proxy Help Information The proxy proxy The Tor Launcher configuration wizard is an important feature for users who use the network that requires such configuration. But it can also lead to a lot of confusion if the user has no idea what a proxy is. Since this is a very important feature for users, we decided to keep it on the main configuration screen and introduced a help that explains when someone would need such a configuration. As part of our work with the UX team, we also coordinate user testing for the new user interface to continue iteration and ensure that we always improve our user experience. We are also planning a series of improvements not only to the Tor Launcher process, but also to the entire browser experience (if you've connected to Tor), including a new user onboarding flow. And last but not least, we're streamlining both mobile and desktop experience: Tor Browser 7.5 adapted to the security slider design we've made for mobile making it a better user experience for the desktop as well. Other We ship the first edition of the Tor 0.3.2 series, 0.3.2.9. This release supports the next generation of onion services. On the security page, we enabled content sandboxing on Windows and resolved Linux issues that prevented printing from working properly. In addition, we've improved macOS translation training and Fixed holes in W^X on Windows. In the end, we moved away from gitian/tor-browser-bundle as the basis of our reproducible environment. Over the past few weeks and months rbm/tor-browser-build has been developed making it much easier to reproduce Tor Browser builds and add reproducible builds to new platforms and architectures. This allows us to ship 64bit bundles of Windows (currently available in the alpha series) and packages for Android on the same day as the release of current platforms/architectures gets out. What's new: Windows + OS X + Linux Update NoScript to 11.1.1 Update Tor Launcher to 0.26 Bug 31767: Avoid using intl.locale.requested pref directly Bug 40013: End of Year 2020 Fundraising Campaign Bug 40016: Fix onion sample LTR locales Bug 40139: Update Onboarding icon 10 .0 Bug 40148: Disable Picture-in-Picture until you investigate and possibly fix Translations update Windows Bug 40140: Videos not working on Tor Browser 10.0 Windows Build System Windows + OS X + Linux Bump Go 1.14.9 opens Bumpsl 1.1.1h Windows Bug 40051: Remove SOURCE_DATE_EPOCH patch Please do torrent over Tor. Tor Browser blocks browser plugins like Flash, RealPlayer, QuickTime, and others: you can manipulate the reveal of the IP address. We do not recommend that you install additional add-ons or add-ons to Tor Browser add-ons, or addons can bypass Tor or compromise your privacy. Tor Browser already has HTTPS everywhere, NoScript and other fixes that protect privacy and security. Security.
